Lab 13 Vectors

Goals

By the end of this lab you should:

- Be familiar with vectors

String splitter

Given the following header:
vector<string> split(string target, string delimiter);
implement the function split so that it returns a vector of the strings in target that are separated by the string delimiter. For example:
split("10,20,30", ",")
should return a vector with the strings "10", "20", and "30". Similarly,
